## 2014 Idaho Vital Statistics

Division of Public Health • Idaho Department of Health & Welfare

## TABLE OF CONTENTS

<b>NATALITY .....</b>	<b>4</b>
Live births and rates, 2010-2014 ( <i>U.S., Idaho, districts, counties</i> ) .....	10
2014 Live births: sex and race/ethnicity ( <i>Idaho, districts, counties</i> ).....	11
2014 Live births: age of mother ( <i>Idaho, districts, counties</i> ).....	12
2014 Live births: education of mother ( <i>Idaho, districts, counties</i> ) .....	13
2014 Live births: attendant at birth ( <i>Idaho, districts, counties</i> ) .....	14
2014 Live births: place of birth ( <i>Idaho, districts, counties</i> ) .....	15
2014 Live births: birth and fertility rates ( <i>U.S., Idaho, districts, counties</i> ) .....	16
2014 Live births: live birth order by age of mother.....	17
2014 Live births: fertility and age-specific rates ( <i>U.S., Idaho</i> ) .....	17
Prenatal care .....	18
2014 Live births: prenatal care by mother's characteristics .....	19
2014 Live births: trimester when prenatal care began ( <i>Idaho, districts, counties</i> ) .....	20
2014 Live births: APNCU Index of prenatal care ( <i>Idaho, districts, counties</i> ) .....	21
2014 Low birthweight live births: weight at birth ( <i>U.S., Idaho, districts, counties</i> ).....	22
2014 Low birthweight live births: race/ethnicity of mother ( <i>Idaho, districts, counties</i> ) .....	23
2014 Low birthweight live births: age of mother ( <i>Idaho, districts, counties</i> ).....	24
2014 Low birthweight live births: live birth order by age of mother.....	25
2014 Low birthweight live births: age-specific percentages ( <i>U.S., Idaho</i> ) .....	25
2014 Live births: birthweight by gestational age.....	26
2014 Live births: birthweight by cigarette smoking status during pregnancy .....	26
2014 Live births: gestational age in weeks ( <i>U.S., Idaho, districts, counties</i> ) .....	27
2014 Live births: number and percent of births by plurality ( <i>Idaho, districts</i> ).....	28
2014 Live births: plurality by gestational age .....	28
2014 Live births: plurality by birthweight .....	28
2014 Live births: WIC participation, infant breastfed ( <i>Idaho, districts, counties</i> ).....	29
<i>Out-of-wedlock live births</i> .....	30
2014 Out-of-wedlock live births: race/ethnicity of mother ( <i>Idaho, districts, counties</i> ).....	32
2014 Out-of-wedlock live births: age of mother ( <i>Idaho, districts, counties</i> ).....	33
2014 Out-of-wedlock live births: live birth order by age of mother .....	34
2014 Out-of-wedlock live births: age-specific percentages ( <i>U.S., Idaho</i> ) .....	34
2014 Live births: risk factors, infections present and/or treated during pregnancy by age of mother .....	35
2014 Live births: risk factors, infections present and/or treated during pregnancy .....	35
2014 Live births: maternal morbidity (complications), characteristics of labor and delivery by age of mother .....	36
2014 Live births: maternal morbidity (complications), characteristics of labor and delivery .....	36
2014 Live births: abnormal conditions of the newborn.....	37
2014 Live births: congenital anomalies of the newborn .....	37
2014 Live births: method of delivery ( <i>U.S., Idaho, districts, counties</i> ) .....	38
2014 Live births: method of delivery by birthweight.....	39
2014 Live births: method of delivery by gestational age .....	39
2014 Live births: method of delivery by principal source of payment for delivery .....	40
2014 Live births: method of delivery by age of mother .....	40
2014 Live births: principal source of payment for delivery by birth attendant .....	41
2014 Live births: principal source of payment for delivery by age of mother .....	41
2014 Live births: principal source of payment for delivery ( <i>Idaho, districts, counties</i> ).....	42
2014 Live births: cigarette smoking before and during pregnancy by trimester ( <i>Idaho, districts, counties</i> ) .....	43
2014 Live births: cigarette smoking during pregnancy by age of mother.....	44
2014 Live births: cigarette smoking during pregnancy by race and ethnicity of mother .....	44

## TABLE OF CONTENTS (CONTINUED)

2014 Live births: pre-pregnancy body mass index ( <i>Idaho, districts, counties</i> ).....	45
2014 Live births: pre-pregnancy body mass index by age of mother .....	46
2014 Live births: pre-pregnancy body mass index by race and ethnicity of mother.....	46
2014 Teen pregnancy: fertility rates, percent out-of-wedlock, percent low birthweight by age ( <i>U.S., Idaho</i> ).....	47
2014 Teen pregnancy: pregnancy rates, abortion rates and ratios by age .....	47
2014 Teen pregnancy: total pregnancies and rates by age of female ( <i>Idaho, districts, counties</i> ) ..	50
2014 Teen live births: age of mother ( <i>Idaho, districts, counties</i> ) .....	51
2014 Teen live births: out-of-wedlock by age of mother ( <i>Idaho, districts, counties</i> ).....	52
2014 Teen live births: low birthweight by age of mother ( <i>Idaho, districts, counties</i> ) .....	53
2014 Teen abortions: abortions, ratios and rates by age of patient ( <i>Idaho, districts, counties</i> ).....	54
2014 Most common given names and selected unique names .....	55

### Information on this section

Definitions, formulas, technical notes and additional information can be found in the:  
**2014 Vital Statistics Annual Report**

This section and other reports from the Bureau of Vital Records and Health Statistics are available on the web at  
[www.healthstatistics.dhw.idaho.gov](http://www.healthstatistics.dhw.idaho.gov).

## NATALITY

### U.S.

The total number of live births for the U.S in 2014 was 3,988,076, an increase of 1.4 percent from 2013 (3,932,181 births)<sup>1</sup>. This was the first increase since 2007, ending a downward trend. The 2014 birth rate was 12.5 per 1,000 population, compared with 12.4 in 2013 and 12.6 in 2012. The 2014 fertility rate was 62.9 births per 1,000 women aged 15-44, up from 62.5 in 2013, which was a historic low for the United States<sup>1</sup>.

### Idaho

Following decades of consistently higher birth and fertility rates, Idaho's birth rates fell considerably in the 1980's to converge with the U.S. rate in 1988 for the first time. After three years below the U.S. rate, Idaho's birth rate rose above the U.S. birth rate again from 1992 through 2014. In 2014, the birth rate for Idaho was 14.0, less than one percent increase from 13.9 in 2013. The fertility rate increased 1.4 percent from 71.7 per 1,000 women aged 15-44 in 2013 to 72.7 births in 2014. The number of births increased by 540 births (2.4 percent), from 22,348 births in 2013 to 22,888 in 2014.

Idaho live birth rates in 2014 ranged from a low of 11.0 per 1,000 population in District 2 to a high of 18.9 per 1,000 in District 7. Six districts experienced higher birth rates in 2014 from 2013. District 1 had the largest rate increase (3.5 percent) from 11.4 to 11.8; District 5 experienced a 3.3 percent decrease from 15.1 in 2013 to 14.6 in 2014.

### Race and Ethnicity of Mother

Beginning in 2004, more than one race and ethnicity may be reported for the mother, and mother's race data were collapsed into six race categories: white, black, American Indian, Asian and Pacific Islander, other race, or race not stated. Ethnicity data were collapsed into Hispanic, non-Hispanic, or ethnicity not stated. In 2014, 89.8 percent of Idaho mothers were white, 1.0 percent were black, 1.7 percent were American Indian, 2.1 percent were Asian or Pacific Islander and 5.4 percent reported other race. A total of 16.0 percent of mothers were of Hispanic origin and 84.0 percent were non-Hispanic.

Race and Hispanic origin are reported separately on the certificate; mothers of Hispanic origin may be of any race. The method in which race data are categorized changed in 2004 with the use of the new birth certificate, and data in 2014 are not comparable with race data prior to 2004. In Idaho, if mother's race is reported as other race and "Hispanic" or "Mexican" is specified as the race, then mother's race remains coded to "other race". Not all states follow this method of coding mother's race. In some states, if mother's race is reported as "Hispanic" or "Mexican", the race is coded as white. Because not all states report race and ethnicity to the National Center for Health Statistics in the same manner, Idaho race data are not comparable with national data. See Technical Notes for more information.

### Age of Mother

The mean age of all Idaho mothers was 27.6 years in 2014. For the 7,894 first-time mothers with known age, the mean age was 24.7 years in 2014, compared with 26.3 years for first-time mothers in the U.S. in 2014. The ages for first-time mothers ranged from 13 to 53 in Idaho in 2014. The majority of Idaho births, 58.4 percent, were to mothers aged 20 to 29 in 2014 compared with 58.8 percent in 2013. Teen mothers aged less than 20 accounted for 5.7 percent of births in 2014 compared with 6.4 percent of all live births in 2013. A total of 35.9 percent of mothers were aged 30 or older in 2014, compared with 34.8 percent in 2013.

**Education of Mother**

In 2004, education data collected on the birth certificate were revised to report the highest degree or level of school completed at the time of delivery. Prior to 2004, the number of years of school completed was reported on the Idaho birth certificate. In 2014, 12.1 percent of mothers were not high school graduates, and 88.0 percent of mothers were high school graduates, had their GED or attained a higher level of education at the time of delivery. Of the Idaho mothers aged less than 18 years, 85.8 percent had not yet received their high school diploma. A total of 35.4 percent of mothers aged 18 and 19 had not received their diploma, and 9.9 percent of mothers aged 20 and older had not received their diploma at the time of delivery in 2014.

**Birth Attendant**

In 2014, 88.5 percent of births to Idaho residents were attended by physicians and 11.5 percent were non-physician attended. While the number of total births increased less than 1 percent from 2013 to 2014, the number of births attended by physicians increased 2 percent from 19,854 in 2013 to 20,245 in 2014. The number of births attended by certified nurse midwives increased 9.0 percent from 1,753 to 1,912; the number of births attended by licensed, other or lay midwives increased 1.3 percent from 614 in 2013 to 622 in 2014.

The category “licensed midwife” was added to the Idaho birth certificate in 2010. A lay midwife can become a licensed midwife in Idaho by meeting the requirements established by the Idaho Bureau of Occupational Licenses under the auspices of the State Board of Midwifery. Successful applicants are required to provide proof of certification as a Certified Professional Midwife and successful completion of board approved courses in pharmacology, the treatment of shock/IV therapy and suturing specific to midwives.

**Place of Birth**

A total of 3.4 percent (785) of Idaho's 2014 resident births occurred in a non-hospital setting. Most of the out-of-hospital births occurred at a residence (490 or 2.1 percent) or a freestanding birthing center (276 or 1.2 percent). In 2014, a total of 10 babies were born en route to a hospital.

**Prenatal Care**

The collection of prenatal care data changed dramatically with the revision of the Idaho birth certificate in 2004. Prenatal care data on the revised certificate are based on the date of the first prenatal care visit, the length of gestation, and the date of birth. Prior to 2004, prenatal care on the certificate was based on the month prenatal care began (first, second, third, etc. month of pregnancy). In 2014, the National Center for Health Statistics (NCHS) made a transition in the measurement used to determine length of gestation which affected prenatal care data. Prior to 2014, the length of gestation was based on the date of the mother's last normal menses and the infant's date of birth. Beginning in 2014, length of gestation is based on the obstetric estimate (OE) at the time of birth. Prenatal care data based on the two different measurements are not comparable. Using the OE, the onset of prenatal care is measured using the infant's birthdate minus the number of day's length of gestation to determine the beginning OE date. The number of days between the beginning of the OE date and the date of the first prenatal care visit is used to determine the trimester prenatal care began. The impact of using the OE to measure Idaho's prenatal care data was an approximate 3 percentage point increase in the percentage of births to women receiving prenatal care in the first trimester. Using the OE, the percentage of mothers receiving prenatal care in the first trimester was 74.2 percent in 2014, 76.0 percent in 2013, and 76.4 percent in 2012.

**Low birthweight and Preterm**

Nationally, 8.0 percent of births were low birthweight (< 2,500 grams or 5 lb. 8 oz.) in 2014<sup>2</sup>, which is unchanged from 2013 (8.0 percent). Among Idaho residents, the percent of low

**Births**

birthweight live births decreased from 6.9 percent in 2013 to 6.5 in 2014. In 2014, the NCHS made a transition for determining length of gestation for the infant. Prior to 2014, the length of gestation was calculated using date of the last menses period and the date of birth; beginning in 2014, the length of gestation is determined by the obstetrical estimate (OE). These two measurements are not comparable. Births are less likely to be classified as preterm using the OE. Final 2014 U.S. data based on the OE indicates 9.6 percent of live births were preterm. (less than 37 completed weeks of gestation)<sup>1</sup>. The percent of preterm infants was 8.2 percent in Idaho in 2014, 9.2 percent in 2013, and 8.6 percent in 2012 using the obstetric estimate. There is a correlation between low birthweight babies and preterm births. Of the 1,863 babies born preterm (prior to 37 weeks gestation), 1,025 (55.0 percent) were born low birthweight compared with 2.1 percent born low birthweight among babies born to term (37 or more weeks gestation).

The National Center for Health Statistics report called “Measuring Gestational Age in Vital Statistics Data: Transitioning to the Obstetric Estimate” can be found:  
[http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64\\_05.pdf](http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64_05.pdf)

**Plurality**

In 2014, there were 22,188 singletons, 687 twins and 12 triplets or higher-order births. The percent of low birthweight infants was 5.0 percent for singletons, 53.0 for twins, and 100.0 percent for triplets or higher-order births in 2014. The Idaho preterm rate was 6.5 percent for singletons, 61.4 percent for twins, and 100.0 percent for triplets or higher-order births in 2014.

**WIC  
(Supplemental  
Nutritional  
Program for  
Women, Infants,  
and Children)**

In 2014, 39.1 percent of live births were to mothers who received WIC food for themselves during pregnancy, compared with 40.1 percent of births in 2013. By district of residence, the percentage of mothers who participated in WIC ranged from a low of 30.8 percent in District 4, to a high of 47.1 percent in District 3. Mothers aged less than 20 were twice as likely to receive WIC food (76.0 percent) than mothers aged 20 and older (36.9 percent). Unmarried mothers were more than twice as likely to receive WIC food (65.5 percent) than married mothers (29.0 percent).

**Breastfeeding**

A total of 90.9 percent of Idaho infants were breastfed at birth in 2014. Mothers aged less than 20 were less likely to have breastfed at the time of birth (87.9 percent) than mothers aged 20 and older (91.1 percent). Fewer unmarried mothers breastfed at birth (84.8 percent) than married mothers (93.2 percent).

**Out of Wedlock**

In Idaho, the total number of births increased 2.4 percent from 2013 to 2014, while the number of out-of-wedlock births increased 5.2 percent from 6,040 in 2013 to 6,354 in 2014. The percent of out-of-wedlock Idaho births increased from 27.0 percent in 2013 to 27.8 percent in 2014. In Idaho, the percentage of births to unmarried mothers ranged from 13.3 percent among Asian or Pacific Islander mothers to 66.6 percent among American Indian or Alaska Native mothers. Nationally, the percent of all births to unmarried women slightly decreased from 40.6 in 2013 to 40.2 in 2014<sup>1</sup>.

**Risk Factors**

The section on the Idaho birth certificate for maternal risk factors was revised in 2014. In 2014, the question for vaginal bleeding was removed, and a question on eclampsia was added. Also added were specific questions regarding infertility treatment on the use of drugs, insemination, and assisted reproductive technology. A total of 6,346 births (27.7 percent) were to Idaho mothers with at least one risk factor during pregnancy. The most common risk factor to mothers was previous cesarean delivery (2,980) followed by gestational hypertension (1,512), and gestational diabetes (1,023).

<b>Infections</b>	There are 12 infections listed on the Idaho birth certificate, plus a category for “other” infections present and/or treated during this pregnancy. The most common infection reported was group B streptococcus; 4,354 or 19.7 percent of births were to mothers with or treated for group B streptococcus. Among births with known data for infection status, 5,381 (24.4 percent) births were to mothers with at least one infection present and/or treated during pregnancy in 2014.
<b>Maternal Morbidity</b>	Maternal morbidity is defined on the Idaho birth certificate as complications associated with labor and delivery. A total of 1.8 percent of Idaho births (406) were to mothers with one or more complications of labor and delivery reported on the birth certificate in 2014. The leading complications reported were: third or fourth degree perineal laceration (269 births), maternal transfusion (79 births), and unplanned operating room procedure following delivery (63 births).
<b>Characteristics of Labor and Delivery</b>	The most common characteristics of labor and delivery reported in 2014 were: epidural or spinal anesthesia during labor (17,184 births or 75.1 percent), antibiotics received by mother during labor (6,437 or 28.1 percent), induction of labor (6,270 births or 27.4 percent), and augmentation of labor (5,478 births or 23.9 percent).
<b>Abnormal Conditions of the newborn</b>	Nearly one in seven newborns had at least one abnormal condition reported on the 2014 birth certificate (3,244 or 14.2 percent). The most common abnormal condition reported was Neonatal Intensive Care Unit (NICU) admission (2,669), followed by assisted ventilation required immediately following delivery (851), and newborn received antibiotics for suspected neonatal sepsis (729 births).
<b>Congenital Anomalies of the Newborn</b>	A total of 151 Idaho newborns had one or more congenital anomalies in 2014. A total of 32 births reported cyanotic congenital heart disease, cleft lip with or without cleft palate was reported for 31 births, and Hypospadias was reported 21 times. Suspected other chromosomal disorders was reported for 18 births (3 had confirmed karyotype disorders), and 23 births reported down syndrome (5 had karyotype confirmed),
<b>Cigarette Smoking</b>	<p>A total of 14.5 percent of mothers reported smoking the three months prior to pregnancy. Of the 3,308 who reported smoking in the three months prior to pregnancy, 921 (27.8 percent) reported they did not smoke anytime during pregnancy. Among the women who smoked during pregnancy, 10.4 percent reported smoking during the first three months of pregnancy; 8.6 percent reported smoking during the second three months of pregnancy; and 8.2 percent reported smoking during the third three months of pregnancy. Overall, 2,431 (10.6 percent) live births were to Idaho mothers who reported smoking any time during pregnancy. The percentage of mothers who reported smoking any time during pregnancy ranged from a low of 6.6 percent in District 7 to a high of 16.6 percent in both District 1 and District 2.</p> <p>By age group, teens aged 18-19 had the highest percentage of mothers who smoked during pregnancy (18.9 percent), and mothers aged 45 and older had the lowest percentage of mothers who smoked (3.7 percent). By race, American Indian or Alaskan natives had the highest percentage of mothers who smoked (18.7 percent), and mothers of other race had the lowest percentage of mothers who smoked (3.1 percent). Non-Hispanic mothers were nearly 3.0 times more likely to smoke during pregnancy (11.8 percent) than Hispanic mothers (4.4 percent) in 2014.</p>

In 2014, 6.5 percent of all live births were low birthweight. Of the 2,431 births to women who smoked during pregnancy, 299 (12.3 percent) infants were low birthweight compared with 5.8 percent of babies born to nonsmokers.

**Method of  
Delivery**

In 2014, the Idaho resident birth rate for vaginal, non-VBAC (vaginal deliveries after a cesarean) births was 73.3 deliveries per 100 births; the total birth rate for vaginal deliveries was 75.8 per 100 births compared with 67.8 per 100 births nationally in 2014. Conversely, Idaho's total cesarean rate (24.2 deliveries per 100 births) in 2014 was lower than the national rate of 32.2 per 100 births in 2014<sup>1</sup>. Rates for VBACs and repeat cesareans are based on mothers with a previous cesarean. Idaho's VBAC rate was 19.5 deliveries per 100 births to women with previous cesarean, and the repeat cesarean rate for Idaho was 80.5 per 100 births to women with a previous cesarean.

**Method of  
Payment**

In 2014, 50.7 percent of deliveries were paid by private insurance in Idaho compared with 49.1 percent in 2013. In 2014, 39.6 percent of births were paid by Medicaid compared with 38.9 percent in 2013. A total of 6.2 percent of births were reported as self-pay, and a total of 2.8 percent of births were paid by other governmental agencies. A total of 0.7 percent of births had "other" payment source or did not have any payment source reported for the delivery. The payment source for delivery may change after the birth certificate is filed with the state.

**Body Mass  
Index (BMI)**

Pre-pregnancy Body Mass Index (BMI) is a measure of weight and height before the woman became pregnant (see Technical Notes for classifications). In 2014, 11,055 (48.4 percent) births were to mothers classified as normal weight while 5,643 (24.7 percent) births were to women who were classified as being overweight and 5,317 (23.3 percent) births were to mothers who were obese prior to pregnancy.

**Teen Pregnancy**

Reportable pregnancies include live births, abortions, and stillbirths. Miscarriages under 20 weeks are not reported in Idaho. In 2014, there were 1,555 reportable pregnancies among Idaho females under the age of 20 (1,309 live births, 240 abortions, and 6 stillbirths). During the past decade there has been a steady decline in the annual teen pregnancy number (from 2,396 in 2004 to 1,541 in 2014) and rate (from 45.2 per 1,000 in 2004 to 27.5 per 1,000 in 2014) among Idahoans aged 15 to 19. The pregnancy rate for females aged less than 15, females aged 15-17, and females aged 18-19 decreased from 2013 to 2014. The rate declined 0.3 per 1,000 to 0.2 per 1,000 among females aged 10-14; declined 3.6 percent from 11.1 in 2013 to 10.7 per 1,000 in 2014 for teens aged 15-17, and decreased 6.3 percent from 63.6 per 1,000 to 59.6 per 1,000 females aged 18-19.

5. Total female population aged 45-49; rates for females aged 45+ are based on female population 45-49.

NA: Not applicable.

## PRENATAL CARE

### Measurement of Prenatal Care

The effects of prenatal care are difficult to quantify, but appropriate care can promote healthier pregnancies by detecting and managing pre-existing medical conditions and providing health behavior advice<sup>1</sup>. The measurement of prenatal care in the U.S. and Idaho changed dramatically in 2014 when the National Center for Health Statistics (NCHS) transitioned from measuring gestational age based on the last normal menses (LMP) and the date of infant's birth to the new measure, the obstetric estimate of gestation at delivery (OE)<sup>2</sup>. This transition was due to the increasing evidence of the greater validity of the OE compared with the LMP-based measure. The OE-based measurement of gestational age impacts prenatal care due to prenatal care being categorized by the trimester in which care began.

Prenatal care data utilizing OE – based measurements has resulted in more accurate data because care is based on a date in a prenatal medical record rather than mother's recollection of the date of first visit. Prenatal care data based on the 2014 revision and the previous standard are not directly comparable.

PERCENT BEGINNING PRENATAL CARE IN THE FIRST TRIMESTER BASED ON OBSTETRIC ESTIMATE OF GESTATION	
Idaho, 2010	76.3%
Idaho, 2011	76.8%
Idaho, 2012	76.4%
Idaho, 2013	76.0%
Idaho, 2014	74.2%

### Adequacy of Prenatal Care Utilization (APNCU) Index

One measure of prenatal care in which classifications of the adequacy of prenatal care are based on the onset of prenatal care, the number of prenatal visits, and the length of gestation is the Adequacy of Prenatal Care Utilization (APNCU) Index. The APNCU Index is based on full recommendations set forth by the American College of Obstetricians and Gynecologists (ACOG). This index classifies care as intensive, adequate, intermediate, inadequate, or no care by comparing the number of actual prenatal care visits to the number of visits that a woman was expected to receive, given the onset of prenatal care and the length of gestation.

In reviewing Trimester of First Prenatal Care Visit and APNCU data, keep in mind:

- 1) Prenatal care data based on date of first visit are not comparable with prenatal care data based on month prenatal care began.
- 2) Not all states have revised their birth certificate to the 2003 U.S. Standard Certificate. Idaho resident births occurring in states with non-revised certificates will not have comparable data for onset of prenatal care. Data are shown as not stated in data table(s).

Parity not stated	29	8	NA	7	NA	2	NA	1	NA	11

1. Other race includes 12 out-of-state births with multiple races. For more information, see Technical Notes.

2. 'Other Government' includes Indian Health Services, CHAMPUS/TRICARE, and other government (federal, state, local).

3. Based on cigarette smoking during pregnancy. For more information, see Technical Notes.

4. High parity for age: one or more previous live births for females 17 years or age or younger; three or more previous live births for females 18-21 years of age; four or more previous live births for females 22-24 years of age; and five or more previous live births for females aged 25 years and older. Not high for age: includes all other combinations of parity and age of mother.

Percentages based on records with stated date of first prenatal care visit. NA: not applicable.

Note: Prior to 2014, the trimester of pregnancy prenatal care began was based on the date of first prenatal care visit, and the length of baby's gestation based on the date of mother's last normal menses and the baby's birth date. Beginning in 2014, the trimester of pregnancy prenatal care began is based on the date of first prenatal care visit, the length of gestation based on the obstetric estimate and the baby's birth date. Data using the two methods are not 100 percent comparable. For more information, see Technical Notes.

Washington	103	61	59.8	33	32.4	8	7.8	-	-	1

Percentages based on records with stated date of first prenatal care visit.

Note: Prior to 2014, the trimester of pregnancy prenatal care began was based on the date of first prenatal care visit, and the length of baby's gestation based on the date of mother's last normal menses and the baby's birth date. Beginning in 2014, the trimester of pregnancy prenatal care began is based on the date of first prenatal care visit, the length of gestation based on the obstetric estimate and the baby's birth date. Data using the two methods are not 100 percent comparable. For more information, see Technical Notes.

1. For both U.S. and Idaho data, the primary measure used to determine the gestational age of the newborn is the obstetric estimate (OE). Prior to 2014, the primary measure used to determine the gestational age of the newborn was based on the date of the mother's last normal menses and the baby's birth date. Preterm data using the two methods are not comparable. Prior year's data based on the obstetric estimate are available upon request. For more information, see Technical Notes.

Percentages based on records with stated gestational age.

1. WIC participation: Did mother get WIC food for herself during this pregnancy? WIC is a supplemental nutritional program for women, infants, and children. Data from birth certificate may differ from data from the WIC Program.

Percentages are based on records with known breastfeeding or WIC participation data.

## OUT-OF-WEDLOCK BIRTHS

### 2013 to 2014 Out-of-Wedlock Births

The number of out-of-wedlock births increased each year from 1998 to 2008, and fluctuated from 2008 to 2014. In the past year, the number of out-of-wedlock births increased 314 (5.2 percent) from 6,040 in 2013 to 6,354 in 2014. Because the total number of births increased at a slower rate from 2013 to 2014 than the number of out-of-wedlock births, the percentage of total live births that were out-of-wedlock births increased 3.0 percent from 2013 to 2014.

### Race/Ethnicity

The 2014 out-of-wedlock percentages increased for the White, and Black population, and decreased for American Indian or Alaska Native, Asian/Pacific Islanders, Hispanics, and women of “other race”. Note, Idaho has relatively small numbers for non-white rates; some fluctuation from year to year can be expected.

IDAHO RACE/ETHNICITY – SPECIFIC PERCENTAGES					
Race/Ethnicity	2014	2013	2012	2011	2010
Total	27.8 %	27.0 %	27.3 %	26.4 %	26.5 %
White	26.2	25.2	25.5	24.7	24.7
Black	33.0	32.7	39.8	42.9	34.9
American Indian or Alaska Native	66.6	70.8	66.4	62.2	60.0
Asian or Pacific Islander	13.3	16.3	16.1	13.9	14.7
Other Race	44.6	46.0	45.4	45.6	46.7
Ethnicity: Hispanic <sup>1</sup>	44.4	45.2	45.0	43.0	45.1

### U.S. and Idaho Out-of-Wedlock Births

The percent of all U.S. out-of-wedlock births declined slightly from 40.6 percent to 40.2 percent from 2013 to 2014. By race, U.S. 2014 out-of-wedlock percent for whites was 36.3 percent higher than Idaho’s percent, and the U.S. black percent was more than twice as high as Idaho’s percent. The U.S. 2014 Hispanic percent was 19.1 percent higher than Idaho’s percent in 2014. In 2014, the rate for American Indians in Idaho was 1.4 percent higher than the U.S. percent. The U.S. 2014 Asian or Pacific Islander percent was 23.3 percent higher than Idaho’s percent in 2014.

	Total	White	Black	American Indian or Alaska Native	Asian or Pacific Islander	Ethnicity: Hispanic <sup>1</sup>
U.S. 2014 <sup>2</sup>	40.2%	35.7%	70.4%	65.7%	16.4%	52.9%
Idaho	27.8%	26.2%	33.0%	66.6%	13.3%	44.4%

When comparing Idaho with the U.S., one should keep in mind that Idaho has a predominantly white population; the usually higher rates for most other races/ethnicities have less effect on the overall rate in Idaho.

### Districts

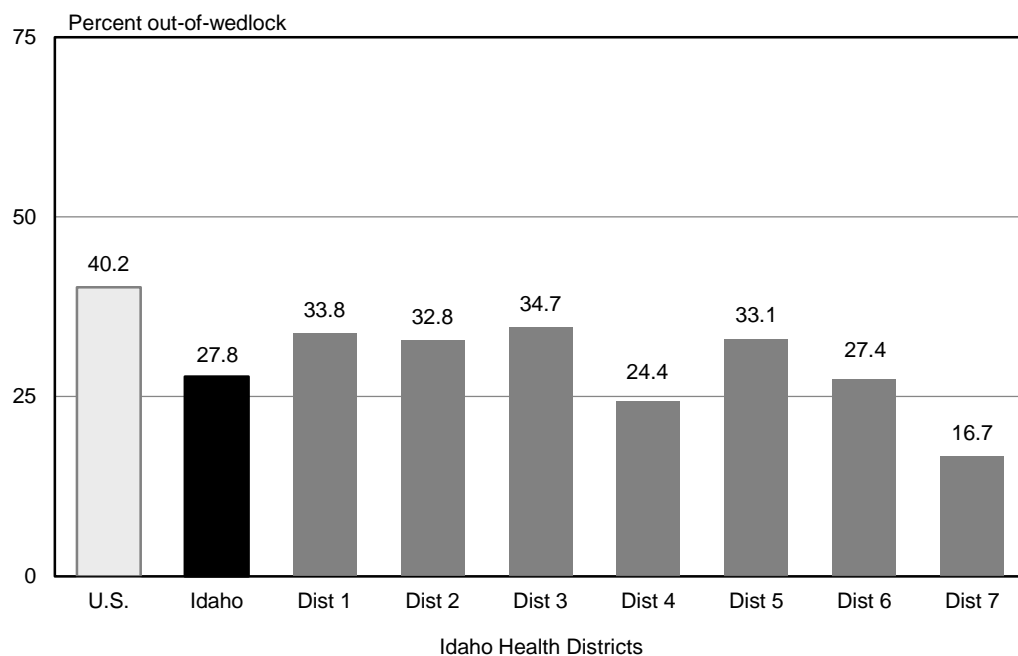

From 2013 to 2014, the percentage of out-of-wedlock births increased in Health Districts 3, 4, 5, 6 and 7, decreased in districts 1, and remained the same in District 2. Districts 3 recorded the highest proportion of live births that were out of wedlock (34.7 percent) followed by District 1 (33.8 percent). District 7 recorded the lowest percent of out-of-wedlock births again in 2014 (16.7 percent).

### Counties

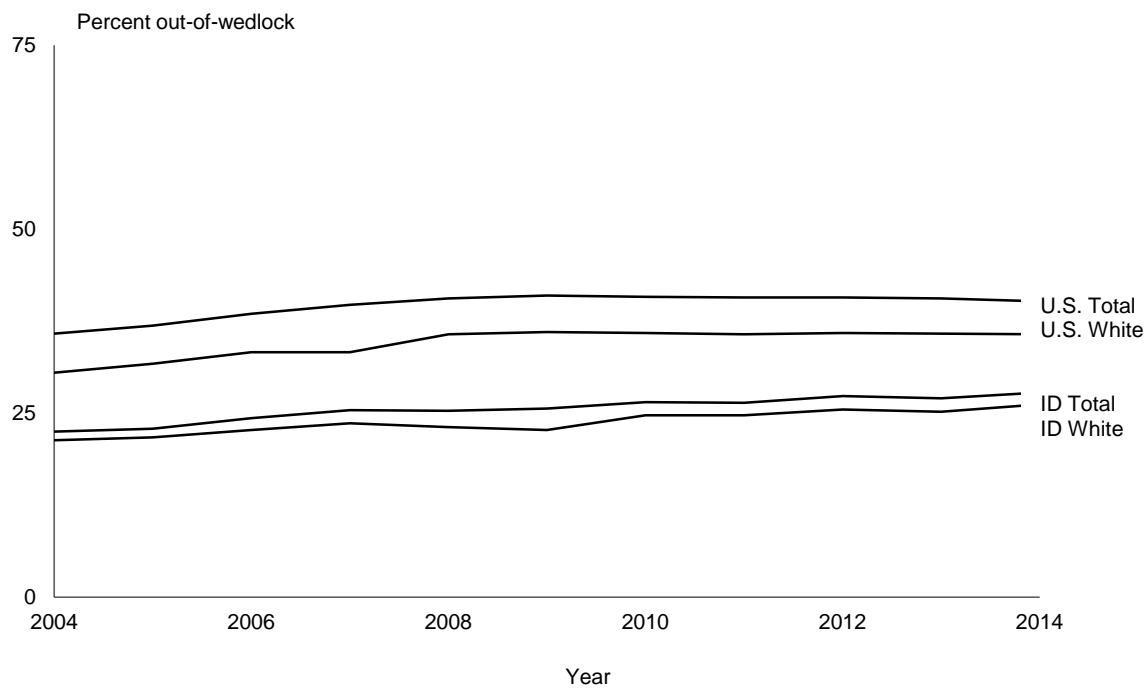

Counties with the highest percentages of out-of-wedlock births were Shoshone (50.7 percent) Lewis (48.6 percent), and Boise (46.2 percent). The lowest percentages occurred in Madison (2.7 percent), Jefferson (14.2 percent), and Butte (15.4 percent).

1. Race and Hispanic origin are reported separately on the birth certificate. Women of Hispanic origin are included in appropriate race totals.
2. “Births: Final Data for 2014,” National Vital Statistics Reports, National Center for Health Statistics, Vol. 64/No. 12, December 23, 2015.

\* U.S. 2014 total vaginal and total cesarean rates are based on all reporting areas.

U.S. 2014 VBAC and other rates are not available for the states with revised certificates.

VBAC: Vaginal birth after previous cesarean. See Technical Notes for formulas.

Not stated	37	33	NA	32	NA	1	NA	1	NA	1	NA	-	NA	3

1. Vaginal births, not including VBAC.

2. VBAC: Vaginal birth after previous cesarean.

Rates are based on records with known data for method of delivery. NA: not applicable.

Total vaginal rate: Number of vaginal deliveries per 100 births.

Vaginal, non-VBAC rate: Number of vaginal, non-VBAC deliveries per 100 births.

Vaginal birth after previous cesarean (VBAC): Number of vaginal deliveries per 100 births to women with a previous cesarean.

Total cesarean rate: Number of cesarean deliveries per 100 births.

Primary cesarean rate: Number of primary cesarean deliveries per 100 births to women who had no previous cesareans.

Repeat cesarean rate: Number of repeat cesarean deliveries per 100 births to women with a previous cesarean.

3. Gestational age is based on the obstetric estimate (OE) at birth. Prior to 2014, the primary measure used to determine the gestational age of the newborn was based on the date of the mother's last normal menses and the baby's birth date. Gestational age using the two methods is not 100 percent comparable. For more information, see Technical Notes.

1. Body Mass Index formula:  $[\text{weight (lb.)} / [\text{height (in)}]^2] \times 703$ . Classifications are from the Center for Disease Control.

2. Interpretation of BMI for adults: Underweight <18.5, Normal 18.5-24.9, Overweight 25.0-29.9, Obese 30+.

3. Beginning in 2004, multiple races and Hispanic origins may be reported on the Idaho birth certificate. For mothers with multiple races, the races were bridged to a single race category; however, bridged-race data are not available for out-of-state births. Total and other race includes 12 births with multiple races.

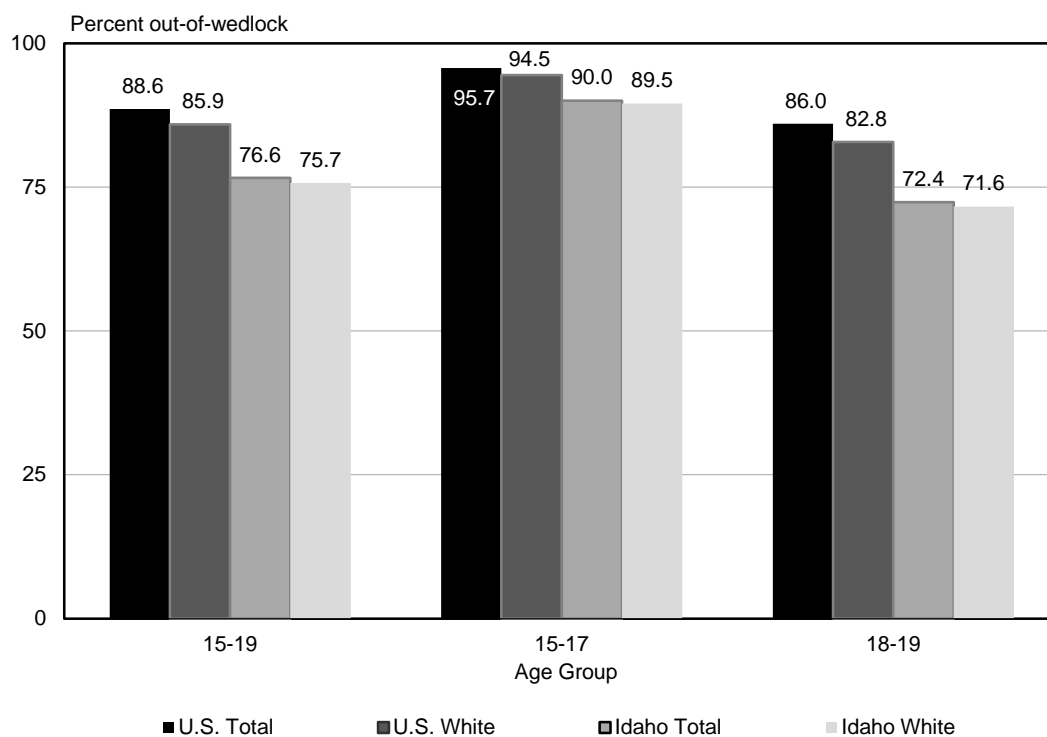

4. Race and Hispanic origin are reported separately on the birth certificate; Hispanic mothers are included in the appropriate race totals. For more information, see Technical Notes.

Percentages are based on records with stated data for body mass index. NA: not applicable.

1. U.S. fertility rates (total and white), unmarried (total and white), and low birth weight (total): "Births: Final Data for 2014," [National Vital Statistics Reports](#), National Center for Health Statistics, Vol. 64. No. 12. December 23, 2015. U.S. low birth weight (white): United States Department of Health and Human Services (US DHHS), Centers for Disease Control and Prevention (CDC), National Center for Health Statistics (NCHS), Division of Vital Statistics, Natality public-use data 2007-2013, on CDC WONDER Online Database, January 2015.
2. Fertility rate: Number of live births per 1,000 females in corresponding age group.
3. Percentages are based on records with known birth weight. Low birth weight: under 2,500 grams.
4. Rates for <15 age group are based on births to females aged <15 and population among females aged 10-14.

## IDAHO RESIDENT TEEN PREGNANCIES AND ABORTIONS 2014

	PREGNANCIES <sup>1</sup>		INDUCED ABORTIONS		
	Number	Rate <sup>2</sup>	Number	Rate <sup>3</sup>	Ratio <sup>4</sup>
<b>TOTAL</b>					
<15 <sup>5</sup>	14	0.2	7	0.1	1,000.0
15-19	1,541	27.5	233	4.2	179.0
15-17	369	10.7	56	1.6	180.1
18-19	1,172	54.1	177	8.2	178.6
<b>WHITE</b>					
<15 <sup>5</sup>	13	0.2	6	0.1	857.1
15-19	1,277	24.3	195	3.7	180.9
15-17	294	9.1	45	1.4	181.5
18-19	983	48.6	150	7.4	180.7

1. Pregnancies include live births, induced abortions, and reportable stillbirths (only those fetal deaths with a gestational period of 20+ weeks or which weight 350+ grams are required to be reported under Idaho law.)
2. Number of pregnancies per 1,000 females in corresponding age group.
3. Induced abortion rate: Number of induced abortions per 1,000 females in corresponding age group.
4. Induced abortion ratio: Number of induced abortions per 1,000 live births in corresponding age group.
5. Rates for <15 age group are based on pregnancies and abortions to females aged <15 and population among females aged 10-14.

U.S. data for teen pregnancies and abortions are not shown because they are not comparable to Idaho data. Abortion data from the Centers for Disease Control and Prevention's National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP) are adjusted to national totals compiled by The Guttmacher Institute (AGI) from their surveys of all known abortion providers because abortion data by age are not reported to the NCCDPHP for three states (Alaska, California, New Hampshire).
